Download Spotify Mac Os X 10.6 8

Hello lovely SONOS people Hope you can assist with this, sorry if it's been asked before!! I'm running an iMac with 10.. 6 8??I'm not a Mac user (and never plan to be) but it strikes me as somewhat ironic that a complaint is levelled at Sonos for no longer supporting a version of OS X which is 5 major releases out of date, when Apple is more than happy to force the obsolescence of hardware platforms.. 6 8, as indeed there was with iOS5 and earlier The new firmware on the players won't work properly with limitations of your old os.. The latest software will not work with my machine but I can't locate a software archive for a older suitable version.. Was all OK until this week but now has stopped Can get the SONOS to operate through an iPad so internet radio, Soundcloud etc are all good but it can't find my iMac which holds the iTunes vaults! Would be a little harsh to have to upgrade my whole iMac just so SONOS can access it.. Do SONOS not hold a software archive to enable me to download earlier controllers that work with 10.. For some reason, and I cant explain why, my SONOS controller software on this machine no longer works so, I'm looking to re-load it with a download from the SONOS site.

Download old versions of Spotify for Mac Media Players Old versions Spotify An endless music library at your disposal.. You can complain you don't want to update your os but unless you do your out of luck using it as a controller as there will not be any current or future version that will work with the old Mac OS.. 6 8 which holds my iTunes library and has been working solidly for, well, for a very long time.. Download spotify 10 6 8 for mac - Spotify 0 9 15 27: Find, share and enjoy your favorite music online, and much more programs.. It's an original Intel 17 inch machine which alas can't have the software updated any further.. 6 8 Thanks in advance to all the great community contributors Thank you so very much for your very kind replys.. Could you please help and give me a link for the software that will work with 10.. I'm sure you could still use the Mac to store music to play But you would need to use another device in your home to do the controlling.. Unfortunately as Im a 1 83ghz Intel Core Duo the best I can achieve is Snow Leopard which I'm happy to say is working well and rock solid apart from SONOS.

Sonos doesn't thoughtlessly abandon operating system support: witness the fact that WinXP SP3 and Android 2.. 2 (which are both ancient in Internet time) continue to be supported One can only assume that there was a technical reason for being unable to continue with OS X 10.
